ABSTRACT OF THE DISCLOSURE

5 The invention relates to a video game mask that facilities display of game instructions and/or static graphics.

 A thin pliable plastic shell conforms to the shape of a video game controller. The shell serves as a mask that
10 supports video game instructions and/or static graphics. Typical video games currently on the market are XBOX, SONY PLAYSTATION, and NINTENDO GAMECUBE. Instructions are mounted on the shell. The instructions inform the game user what functions are performed by each actuator button of the
15 controller. The shell permits the actuator buttons of the controller to be operated from outside the shell so the shell remains in place and the instructions are displayed during game play.
